MEADOW AND PASTURE MIXTURES

MEADOW MIXTURES Seed 14-16 lbs. per acre

For Medium Lime Soils SCOTTS Red Clover Mix \$41.00 cwt. Red 6 lbs., Alfalfa 2 lbs., Alsike 2 lbs., Timothy 5 lbs.

For High Lime Soils SCOTTS Alfalfa Mixture \$45.00 cwt. Alfalfa 6 lbs., Red Clover 4 lbs., Timothy 5 lbs.

For High Lime Soils SCOTTS Alfalfa Mixture with Ladino \$49.00 cwt.

Alfalfa 6 lbs., Red Clover 4 lbs., Timothy 5 lbs., Ladino ½ lb.

SCOTTS Green Manure Mixture\$19.50 bu.

A sure catch legume mixture for soil building and plow under. May also be used for pasture or hay. Contains Mammoth, Sweet Clover and Southern Alfalfa. Sow 10-12 lbs. per acre.

SCOTTS Crop-Land Pasture Mixture \$57.50 cwt.

Contains Ladino, Alsike, Birdsfoot Tre-foil, Kentucky Bluegrass, Ky. 31, Fescue, Reed Canary Grass, Brome Grass, Orchard Grass, Perennial Ryegrass and Redtop. Sow 25-30 lbs. per acre.

SCOTTS Crop-Land Mix is suggested where the field is to be left in pasture for at least 5 years and where heavy grazing is desired. Apply fertilizer and lime and follow recommended seeding methods.

SCOTTS Spring Pasture Mixture\$39.50 cwt.

A top quality, balanced, widely used mixture of legumes and grasses containing Ladino Clover for establishing highly productive permanent pastures. Contains Alfalfa, Red Clover, Alsike, Ladino, Kentucky Bluegrass, Meadow Fescue, Timothy, Orchard Grass and Ryegrass.

SCOTTS Meadow & Pasture Mixture \$29.50 cwt.

An ideal mixture for average type of soil where hay may be needed for a year or two. Fifty percent legumes by weight. Contains Alsike, Red Clover, Sweet Clover, Lespedeza, Ryegrass, Meadow Fescue, Timothy and Orchard Grass.

Pasture mixtures are sown 20 to 25 lbs. per acre for new seedings and 15 lbs. per acre for reseeding an established pasture.

"SCOTTS" grade is the highest quality seed available. It is carefully selected and noxious weed free. Most lots will test 99.75% pure seed or higher.

FARMER'S CHOICE: Choice, clean seed, low in weed content. Higher quality than is generally available at comparable prices.

TREATED HYBRID SEED CORN

SCOTTS Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. Ohio Certified and Experimental Hybrids not listed are available upon inquiry.

The round kernels are graded uniformly and will yield just as well at the flats but special plates are usually required for accurate planting. These plates are available for most standard planters. All corn is treated for protection against disease.

A Favorite Hybrid for Short Season Planting

Scotts 11 is one of the earliest maturing corns especially adapted to short season areas or for late planting where later hybrids are normally used. An exceptionally high yielder for an early hybrid, surpassing everything in its class. Matures in 90 to 95 days. Dark green color with sound dark yellow kernels free from disease. Dries out quickly and will crib early. Ears are medium size and husk easily.

A typical early corn that can't be topped for yield when compared with other early hybrids.

Large kernel structure is shown in cross section of average ear

Large diameter, tapered ear of Scotts 11 is shown below.

YOU CAN DEPEND ON HIGH QUALITY,

I am very well pleased with your hybrid corn seed. Especially Scotts 11, as it grows very quickly and I can plant the same ground in wheat.

G. T. S., Belle Mead, N. J.

I have always told my neighbors that I get the best and cleanest seeds from Scotts I shall always have a good word for your firm and seed.

J. G. M., Hinton, W. Va.

Top Yielder in the Early Maturity Class

Scotts 22 has outyielded everything in its maturity class and has compared favorably in yield with later hybrids.

Grows medium tall with good stalks and roots. Reaches maturity in 95 to 100 days. Resistant to blight and smut. Medium to large size sound ears that dry out rapidly. Cribs slightly later than Scotts 11. Will withstand wind and drought due to the strong root system.

For a hybrid that will produce outstanding yields under a variety of conditions, you can't do better than Scotts 22.

Cross section above shows sound, uniform kernel structure.

Pictured below is the typically large ear which accounts for the high yield of this hybrid.

TOP YIELDS EVERY TIME WITH Scotts

Scotts seed is the best I have ever used. I believe every seed came up and produced one hundred percent. I have recommended your seed to many a farmer as the best.

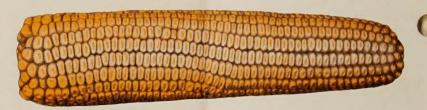

P. W., Linton, Indiana

Scotts 22 has done as good or better than any corn I have ever planted. It stands up and drys out good and is not subject to dropping ears like some corn.

J. P. O., Ungers, W. Va.

A Sturdy Hybrid, Resistant to Disease and Borer

Scotts 33 is a handy size hybrid of the K group, reaching maturity in 100 to 105 days. Exceptionally disease resistant and more corn borer resistant than other medium maturity hybrids. Stalks are dark green color and strong with an attractive appearance. Sound dark yellow deep kerneled ears that husk clean and easily.

Produces the shorter fodder and is an early crib corn. Many farmers report Scotts 33 the best corn they had in years, with yields as good or better than later hybrids and the corn sound and ready for early cribbing.

Try this hybrid for yield and husking qualities—there's nothing in its class that can beat it.

The handy size ear, a quality which many farmers like in this hybrid, is shown above.

Cross section below shows consistently uniform, disease free kernels.

Scotty's PLANTING AND PRODUCTION TIPS

Plant in accordance with the recommended time for your area and substitute earlier maturing hybrids if unfavorable weather delays planting.

Early hybrids should be planted at the rate of one kernel per hill for each 20 bushels of expected production per acre. Later hybrids, one kernel for each 25 bushels expected per acre. The proper use of green manure, barnyard manure, legume sod, lime or commercial fertilizers will increase yields and improve the capacity of the soil to hold water and air.

For maximum yield corn should be planted at a rate which will produce ears weighing about ½ lb. each. A loss in yield from 8 to 10 bushels per acre will result from each 1/10 lb. ears go over this average.
